

AQUIVATOR

Der **AQUIVATOR** is a tachyonized water jet adjuster with a joint and intermediary coupling, which can be screwed onto any conventional water tap. It fits all water tap types with internal or external threading.

This cost-efficient variation features three advantages:

- the water is vitalized
- most of the lime in the water is brought into suspension, resulting in less limescale deposits
- it slightly swirls the water, thus saving up to 50% of water consumption

The AQUIVATOR is useful in rented apartments, holiday homes, hotel rooms etc. and can be easily mounted and dismantled.

TECHNICAL DETAILS

Material: Chrome steel

Size: 24 x 38 mm

Thread: 3/8" , 1/2" M22
